## **DETAILED ACTION**

The Office Action is in response to the 371 of PCT/JP03/08708 filed July 9, 2003.

Claims 1-5 and 11-15 have been cancelled; amended claims 6-10 and 16-21 are being examined on the merits herein.

## Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 6-10 are rejected under 35 U.S.C. 112, first paragraph, for scope of enablement because the specification, while being enabling for the treatment of drug-induced neuropathy, does not reasonably provide enablement for the prophylaxis of drug-induced neuropathy as claimed.

The instant claims are drawn to a pharmaceutical composition and a method for the prophylaxis of drug-induced neuropathy. The instant specification fails to provide information that would allow the skilled artisan to practice the instant invention. Attention is directed to *In re Wands*, 8 USPQ2d 1400 (CAFC 1988) at 1404 where the court set forth the eight factors to consider when assessing if a disclosure would have required undue experimentation. Citing *Ex parte Forman*, 230 USPQ 546 (BdApls 1986) at 547 the court recited eight factors:

(1) the nature of the invention; (2) the state of the prior art; (3) the relative skill of those

in the art; (4) the predictability or unpredictability of the art; (5) the breadth of the claims;

(6) the amount of direction or guidance presented; (7) the presence or absence of

working examples; and (8) the quantity of experimentation necessary.

Nature of the invention:

The instant invention pertains to a method for the prophylaxis of drug-induced

neuropathy.

The state of the prior art:

The skilled artisan would view that the prophylaxis of one or more symptoms of

drug-induced neuropathy totally, absolutely, or permanently, is highly unlikely, since one

cannot guarantee that the drug-induced neuropathy will always be prevented (Quasthoff

et al., Journal of Neurology, Jan. 2002, abstract; page 15, conclusion).

The relative skill of those in the art:

The relative skill of those in the art is very high.

The predictability or lack thereof in the art:

The skilled artisan would view that the treatment to prevent drug-induced

neuropathy, absolutely, or permanently is highly unpredictable (Quasthoff et al., Journal

of Neurology, Jan. 2002, abstract; page 15, conclusion).

Art Unit: 1609

The amount of direction or guidance presented and the presence or absence of working examples:

In the instant case, no working examples are presented in the specification as filed showing how to prevent drug-induced neuropathy totally, absolutely, or permanently. Note that lack of a working example, is a critical factor to be considered, especially in a case involving an unpredictable and undeveloped art. See MPEP 2164.

Genentech, Inc. v. Novo Nordisk, 108 F.3d at 1366, states, "a patent is not a hunting license. It is not a reward for search, but compensation for its successful conclusion" and "[p]atent protection is granted in return for an enabling disclosure of an invention, not for vague intimations of general ideas that may or may not be workable".

Therefore, in view of the *Wands* factors, e.g., the amount of direction or guidance provided, absence of working examples, and the predictability of the art discussed above, to practice the claimed invention herein, a person of skill in the art would have to engage in <u>undue experimentation</u> to test the combination in the instant claims whether preventing drug-induced neuropathy totally, absolutely, or permanently (page 11, column 1, 1<sup>st</sup> full paragraph; page 14, column 1, 2<sup>nd</sup> heading "when should chemotherapy be limited or even stopped?").

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 1609

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 6-10 and 16-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Foguet et al. (WO 01/72288A2).

Foguet teaches the administration of cytidine 5'-diphosphocholine (CDP-choline) for the treatment of alcohol withdrawal syndrome. The reference teaches that chronic alcohol abuse has been reported to impair dopamine sensitivity; an effect that probably arises from changes in neuronal membrane fluidity and in the number and functionality of receptors (i.e., peripheral neuropathy) (page 1, all), meeting the limitations of claims 6, 7, 9, and 10.

Additionally, Foguet teaches that CDP-choline can be administered orally or parentally (page 3, lines 3-9) and in the form of tablets, capsules, powder, granules, cachets, lozenges, solution, suspension, emulsion, syrup, and the like (page 3, lines 21-25; example 1 and 2), thus meeting the limitations of claims 8, 16-20.

Furthermore, no patentable weight is given for the "intended use" of the pharmaceutical composition containing CDP-choline as recited in claims 16-20. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190

Art Unit: 1609

USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).

Thus Foguet anticipates the instantly claimed invention.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Foguet et al. in view of Remington's: The Science and Practice of Pharmacy, Nineteenth Edition, Vol I, 1985, page 806).

Art Unit: 1609

Foguet is discussed above.

It is well-settled law that combining printed instructions and an old product into a

kit will not render the claimed invention nonobvious even if the instructions detail a new

use for the product. See *In re Ngai*, 367 F.3d 1336, 1339, 70 USPQ2d 1862, 1864 (Fed.

Cir. 2004). Further, the inclusion of a package insert or label showing the "the name of

drug, dosage, dosage form, route of administration, indication and direction of use" of a

pharmaceutical composition is mandated by 21 CFR 201.57 and is therefore obvious to

one of ordinary skill in the art.

Thus, it would have been obvious to one of ordinary skill in the art at the time of

the invention to have packaged the composition as taught by Foguet and included the

medication as a package with instructions. The motivation is that it is mandated by law,

(21 CFR 201.57).

Conclusion

Claims 6-10 and 16-21 are not allowed.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to SAHAR JAVANMARD whose telephone number is (571) 270-3280. The examiner can normally be reached on 8 AM-5 PM MON-FRI (EST).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, JEFFREY STUCKER can be reached on (571) 272-0911. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
